Keep stomach empty for more than half an hour before and after taking an rotavirus vaccine.</p> <p>2. Can be vaccinated at the same time with other vaccines, but do not mixed with other vaccines or solutions.</p> <p>3. This vaccine can only prevent diarrhea and vomiting caused by rotavirus, however, it can' t prevent diarrhea and vomiting caused by other causes.</p> <p>4. It is recommended to wash your hands after changing diapers to prevent the spread of rotavirus in the vaccine.</p>
	3 doses (RotaTeq®): 2, 4 and 6 months old		
Hepatitis A vaccine (Born before January 1, 2017)	At least 12 months old (1st dose) and 6-12 months later after the 1st dose (2nd dose)	Severe allergic reactions to any of the ingredients of this vaccine before	May occur redness and pain at the injection site, headache, anxiety, fatigue or fever.
Pneumococcal conjugate vaccine, 13-Valent (Not covered by NHI)	Could be prescribed the additive dose at 6 months old	<p>1. Severe allergic reaction to any of the ingredients of this vaccine before</p> <p>2. Born less than 6 weeks</p>	Local redness at injection site or mild fever may develop; usually recover within 2 days.

Methods suggested for reducing the fever:

1. Encourage more fluid oral intake, including boiled water, juice, beverages, fruits or diluted sport drinks.
2. Reducing clothing or body covering to promote body heat dissipation.
3. Maintaining indoor air circulation and keep room temperature around 20-24 ° C.
4. Keep indoor quiet and encourage the child to take more rest.

5. Serve antipyretics according to doctor's instruction.
6. If you have taken antipyretic measures but the fever persists, please seek medical attention as soon as possible.
