

【痰液檢驗】採檢說明

1. 咳吐痰液前請先用開水漱口數次，再從胸腔深部咳痰，切忌勿讓口水鼻涕食物殘渣污染。
2. 痰液直接吐入塑膠收集盒內並立即送檢，或保存在冰箱底層，但不能超過二十四小時。
3. 多次醫令檢驗的檢體請逐日送檢，**並寫上採檢日期**，以免影響檢驗結果。

Remove dentures and rinse mouth with drinking water for a few times before obtaining a "deep cough" sputum. Saliva, nasal discharge and particles of food from the mouth should not go into the specimens.

Take a deep cough and spit the sputum directly into a plastic container. Transport the specimen either to the laboratory immediately or may be refrigerated, but should not be stored for more than 24 hours. **Please note the date of each specimen collected.**

If more than one specimen is requested(for example, 3 AFB cultures are requested), collect only one specimen per day, first thing in the morning. Have specimens delivered to the Laboratory DAILY.
