

## 【糞便檢驗】採檢說明

---

1. 採取量約為一指節大小，檢體請用塑膠棒直接挑放到塑膠收集盒內。
2. 檢體切忌用衛生紙包裹或沾到水和尿液。
3. 糞便若需測試是否有消化道出血時，最好再受檢前三天起禁食肉類、動物內臟、鐵劑，以免產生偽陽性。
4. 固態形狀糞便如不能立即送檢，請放置冰箱底層保存隔日送檢，黏液狀糞便請立即送檢。

Use a plastic stick to pick up a peanut-sized specimen in a plastic container.

Toilet tissue should not be used to wrap up the stool, neither water nor urine should go into the specimen.

If testing of the stool is for the presence of gastrointestinal bleeding, patient should not consume meat, animal organs, iron pills for three days before the testing in order to avoid false-positive results.

If solid stool cannot be sent to the laboratory immediately, it should be refrigerated and send to the laboratory on the following day, while mucous stool should be rushed to the laboratory at once after the specimen is collected.
